

Abstract

In a mobile device that includes two displays and is foldable, it is necessary to unfold a part having been folded before starting call. In the case of a mobile device further including any imaging device, an image to be taken cannot be confirmed from a subject side. According to a mobile device of the invention, a display side housing (100) is connected via a hinge (3) to a body (2) including an operation section (8) to be foldable. The display side housing (100) consists of a lower housing (1) connected to the hinge (3) and an upper housing (51) connected to the lower housing (1) to be invertible. An imaging device (6) is provided on one face of the lower housing (1), and a first display (4) is on the other face. A second display (54) is provided on one face of the upper housing (51). Any image to be taken can be displayed on both displays.
